Assignment Three
BSDS Spring 2021
(due 2/5, 11:59pm PST)

Submit via a link or file upload any example of data visualization and answer the following questions about this example (submitted through Canvas). This is an open-ended assignment; it can be anything from a graph/plot you created to a fancy interactive data visualization on the web.

1. What is the data being visualized?

2. What is the purpose of the visualization, i.e. is the author trying to convince you of something or showcase something interesting?

3. Can you see any apparent outliers in the data from the visualization?

4. Develop a hypothesis about the data using this visualization.

5. Could this visualization be altered to intentionally distort the data or to convey an alternate or contrary message than the original intent?
